

POLIGRAF

from T_EX to printing house

Janusz Marian Nowacki

The *Poligraf* package is a format-independent support package for T_EX, facilitating the preparation of T_EX documents for printing in professional printing houses. *Poligraf* surrounds a page with graphical elements such as crop marks, registration marks, color steps, color bars etc. The package can also be used for colour separation (as an interface for the package CMYK-HAX). The *Poligraf* package was first presented at the BachoT_EX'96 conference.

The technology of printing requires that extra graphic elements should be added to a printed sheet

POLIGRAF package (www.gust.org.pl)
consists of:

- poligraf.sty – **TEX macros**, 3.4 KB
- crops.pro – **DVIPS header**, 6.5 KB
- separate.pro – **DVIPS header**, 8.5 KB
- readme – 6.0 KB

Colour separations are supported by:

- cmyk-hax.tex – 23.0 KB

U S A G E

plain:

\input poligraf.sty

LAT_EX:

\usepackage{poligraf}

One has to declare the size of the printed sheet, e.g.:

```
\special{papersize=210mm,297mm}
```

I also find it advisable to use option
-t unknown from DVIPS program.

```
dvips -t unknown foo.dvi
```

The following commands should be used in
order to prepare colour separations:

- \Separate\CYAN

or

- \Separate\MAGENTA

or

- \Separate\YELLOW

or

- \Separate\BLACK

If, for some reasons, POLIGRAF package cannot be used in a paricular environment, a user may wish to use its DVIPS headers:

```
dvips -h crops.pro -t unknown foo.dvi
```

or

```
dvips -h separate.pro -h crops.pro ...  
      ... -t unknown foo.dvi
```
